Sportmetryx Football

Section Guide - what every section does, the benefit it delivers, and how to use it

Summary edition · Demo password: Demo-SMX-2024! · All marketplace purchases are labeled DEMO - no real payments

1 · Access & Accounts

Landing Page /

WHAT IT IS

Public overview of the platform: the scoring model (READY / MONITOR / COMPROMISED), module map, and trust & audit principles.

BENEFIT

New users understand the product before signing in; stakeholders can share a single link for demonstrations.

HOW TO USE

Read the module cards, then use Sign in (existing account) or Continue as guest (read-only preview with synthetic data).

Sign In /login

WHAT IT IS

Secure email + password login with role-based access control (RBAC). Sessions are cookie-based and server-verified.

BENEFIT

Each role sees only what it should: no cross-role data leakage, fully auditable access.

HOW TO USE

Enter any demo account (e.g. coach@demo.sportmetryx.dev) with password Demo-SMX-2024!. Guests use the guest link without an account.

Guest Mode /guest

WHAT IT IS

Read-only mode using synthetic sample data when you have no account (or the database is unreachable).

BENEFIT

Investors, parents, or new staff can explore the full UI with zero risk to real data.

HOW TO USE

Click Continue as guest on the landing page. All write actions (checkout, interventions) stay disabled and clearly labeled.

Admin Console /admin

WHAT IT IS

Administrator workspace for users, sessions, and system integrity (audit-chain verification).

BENEFIT

One place to provision accounts, review activity, and confirm the tamper-evident audit log has no breaks.

HOW TO USE

Sign in as admin@demo.sportmetryx.dev, review the user table, and run the audit-chain check to verify record integrity.

2 · Performance Core

Roster /roster

WHAT IT IS

Searchable squad list with each athlete's current readiness band (READY >= 70, MONITOR 40-69, COMPROMISED < 40, or WITHHELD).

BENEFIT

Coaches spot at-risk athletes in seconds instead of scanning spreadsheets.

HOW TO USE

Filter by band or name; click any athlete row to open their full profile. Sort by readiness to triage training groups.

Athlete / Player Profile /player/[id]

WHAT IT IS

Deep individual view: score components, evidence quality (confidence), validity gates, history, and consent status.

BENEFIT

Explains WHY an athlete scores as they do - never a black-box number; builds trust in decisions.

HOW TO USE

From the roster, open a player. Review the component breakdown, check any WITHHELD reason (e.g. missing consent, stale baseline), then act in Team Command.

Team Command /team-command

WHAT IT IS

Squad-level command center: aggregated readiness, distribution across bands, and priority call-outs.

BENEFIT

Answers the daily question 'who do I push, who do I protect?' in one screen.

HOW TO USE

Each morning, scan the COMPROMISED / MONITOR lists, open flagged athletes, and plan the day's adjustments from there.

Game Readiness /game-readiness

WHAT IT IS

Match-day readiness projection per athlete, combining recent load, recovery, and score trend.

BENEFIT

Objective input for selection meetings - pick the squad on evidence, not gut feel.

HOW TO USE

Before match day, review projected readiness per position; discuss borderline athletes with the performance staff.

Position Room /position-room

WHAT IT IS

Readiness and scoring grouped by playing position (GK, DEF, MID, FWD).

BENEFIT

Unit coaches see their own group in context; positional load differences become visible.

HOW TO USE

Select a position tab to compare your unit; use it in unit-specific planning meetings.

Practice Command /practice-command

WHAT IT IS

Training-session view: who is ready to train fully, who needs modification, today.

BENEFIT

Prevents overtraining - modifies sessions before injuries happen, not after.

HOW TO USE

Check before each session; athletes in MONITOR / COMPROMISED get modified loads per the recommendations shown.

Recovery Command /recovery-command

WHAT IT IS
Recovery status overview: sleep, soreness, and recovery-trend signals feeding the score.

BENEFIT
Makes recovery a managed resource, equal in priority to training load.

HOW TO USE
Review after heavy training blocks; schedule extra recovery for athletes trending down across several days.

3 · Care, Data Quality & Context

Interventions /interventions

WHAT IT IS
Create and track care actions (load reduction, medical referral, recovery protocol) linked to athlete scores.

BENEFIT
Closes the loop: a risk signal leads to a documented action with a follow-up - nothing falls through the cracks.

HOW TO USE
From a flagged athlete, open an intervention, choose the type and note, save; track its state until resolved. Every action is written to the audit log.

Data Quality /data-quality

WHAT IT IS
Validity-gates dashboard: calibration freshness, sample integrity, timestamp freshness, baseline sufficiency, consent state.

BENEFIT
Shows WHICH data can be trusted today - scores fail closed when evidence is weak, so no decision rests on bad data.

HOW TO USE
Review weekly; re-run imports or recalibrate devices for any gate shown as failing.

Environment & Travel /environment-travel

WHAT IT IS
Context layer for heat, travel, and scheduling factors that affect performance outside of training itself.

BENEFIT
Separates 'he is declining' from 'he played in 35°C heat' - fairer evaluations, better trip planning.

HOW TO USE
Around travel weeks, check environmental load alongside readiness to adjust expectations and plans.

Research /research

WHAT IT IS
Aggregate, anonymized analytics for sports-science staff: cohort trends and model calibration checks.

BENEFIT
Turns months of session data into insight - validate the scoring model and find cohort patterns.

HOW TO USE
Select a cohort and time range; export results for reports. Individual identities are never exposed here.

Digital Twin Simulation /player/[id]/twin

WHAT IT IS

'What-if' simulator: replay a training block with modified load and see the projected score outcome.

BENEFIT

Test decisions safely - try a lighter week before committing to it in real life.

HOW TO USE

From a player profile, open the twin, adjust the load parameter, run the simulation, and compare projected bands.

4 · Marketplace (Demo Commerce)

Marketplace Listing /marketplace

WHAT IT IS

Catalog of data products: team data exports (derived from real import jobs) and synthetic sample datasets. Sellers can create listings with multiple product photos.

BENEFIT

Shows the commercial layer of the platform - how data could be packaged and sold - with full honesty labels (every item is marked DEMO / synthetic).

HOW TO USE

Browse or filter by tag, data type, and availability; search by name; open a product card for details and source summary; download a labeled sample CSV before 'buying'.

Sell a Product /marketplace/sell

WHAT IT IS

Listing creation form: name, description, price, and multiple image uploads with previews and re-ordering.

BENEFIT

Team staff can package their own data products for sale - the marketplace becomes a two-sided store.

HOW TO USE

From the marketplace, open Sell; fill the form, drag / select several photos (the first image becomes the cover), and publish. Images are stored on the server; uploads are validated by type and size.

Cart & Checkout /marketplace/cart

WHAT IT IS

Shopping cart with automatic calculation (price x quantity per line, grand total) and a demo checkout flow.

BENEFIT

Complete commerce UX without touching real money - ideal for demos and stakeholder reviews.

HOW TO USE

Add products with 'Add to cart' (the floating cart dialog shows live totals); open the full cart page, adjust quantities, then Check out. The checkout re-prices every item server-side and records a MARKETPLACE_DEMO_PURCHASE entry in the tamper-evident audit log. No payment processing, no money moved - always labeled demo.

5 · The Scoring Model (Behind Every Screen)

How scores are built

scoring engine

WHAT IT IS

Seven weighted components (fitness, load, recovery, sleep, soreness, readiness signals, context) normalized against each athlete's OWN baseline percentiles (p10 / p50 / p90).

BENEFIT

Every athlete is measured against themselves, not the squad average - a 65 for a returning-injury player means something different than for a starter.

HOW TO USE

Bands: READY >= 70 · MONITOR 40-69.9 · COMPROMISED < 40 · WITHHELD when evidence is insufficient.

Validity gates & audit trail

trust layer

WHAT IT IS

Scores fail closed: if calibration is stale, consent is missing, samples are incomplete, or timestamps are old, the score is WITHHELD with an explicit reason.

BENEFIT

The platform never presents a confident number built on weak evidence - this is the core trust guarantee.

HOW TO USE

Every sensitive action (purchases, interventions, consent changes) is written to a SHA-256 hash-chained audit log that anyone can verify for tampering.
